I build web and mobile products end to end: the database, the API and the interface people use every day. Most of my work runs on TypeScript, Next.js, Node.js, PostgreSQL and Flutter.

I'm a full-stack developer who likes owning a feature from the first table migration to the final pixel, on the web and on phones. Working across the whole stack means fewer hand-offs, faster releases and fewer surprises in production.

I've built online stores, internal dashboards, ERP modules, mobile apps in Flutter and React Native, and integrations with third-party platforms. I care about clear data models, fast screens, and code the next developer can change without fear.

When I'm not shipping features, I'm usually reading about databases, refining my tooling, or helping teams untangle slow queries and messy deployments.

Experience

Full-Stack Developer

Nov 2021 – Present

ALABUO TRADING CO., Remote, Contract

Leading the development of the company's digital products in Saudi Arabia, centered on ALABUO Steel, its custom ERP system, alongside public platforms such as AKAFI.net, a B2B marketplace for industry, trade and construction.

- Developed core modules of ALABUO Steel, the company's custom ERP system, covering sales, quotations, delivery orders and purchasing, with business rules that keep orders consistent with approved quotations.
- Built AKAFI.net, a multilingual B2B marketplace for industry, trade and construction, with listings, map-based search, in-app messaging and paid listing packages.
- Built an e-invoicing service that digitally signs invoices and integrates with ZATCA's FATOORA platform for clearance and reporting, in line with Saudi e-invoicing (Phase 2) requirements.
- Built connect.alabuo.sa, a business messaging platform that brings WhatsApp customer conversations and campaigns into one dashboard for the company's teams.
- Deployed and maintained the company's systems on Linux servers using Docker, Coolify and PostgreSQL.
- Turned change requests from operational teams into production features, working within a small development team.

Next.js, TypeScript, PHP, Flutter, Node.js, PostgreSQL, MySQL, CPanel, Prisma, Docker, Coolify

Freelance Developer

May 2021 – Sept 2021

Self-employed, Remote, Freelance

Supported a private company with updates and new features for its existing apps, while building my own projects and client applications as an independent developer.

- Worked with a private company on its existing applications, fixing issues, improving features and shipping updates on request.
- Built Mustache, a digital goods store for buying digital currency top-ups, game subscriptions and software licenses online, taking it from initial idea to release.
- Developed several applications for freelance clients, from requirements through to delivery.

PHP, Laravel, MySQL, Android Studio, iOS

Skills

Interface	**React, Next.js, TypeScript, Tailwind CSS, HTML & CSS,** Motion
Mobile	**Flutter, Dart, Firebase, React Native, Google Play, App Store,** Expo
Application	**Node.js, REST APIs, NestJS, Express, Webhooks & integrations,** GraphQL, PHP & Laravel
Data	**PostgreSQL, Prisma, MySQL,** Redis, MongoDB
Infrastructure	**Git, Docker, Linux & Nginx, GitHub Actions, Vercel, S3 storage,** AWS

Languages

Arabic, native; English, professional
